## MIRASYS – DEEP VISION DATA COMPANY

Mirasys is one of the leading suppliers of open platform Video Management Systems (VMS). Founded in 1996, Mirasys focuses on the most valuable asset of your operation: **DATA**

Mirasys' VMS software is one of the preferred choices to collect, store, and provide data from CCTV cameras and other related sensors to both small and large installations. Mirasys is a deep vision data company that allows customers around the world to extract maximum information from old and new cameras and sensors. The data extracted from the footage gives customers and clients the ability to improve security, optimise processes, enhance business' operation and decrease the need for human monitoring. Based in Helsinki, Finland, the company operates in over 40 countries with regional representations. The local teams cooperate with leading distributors, system integrators, security service providers, and large customers. More than 70,000 customers use Mirasys systems with over one million connected cameras.

**THE VMS PIONEER: BENEFIT OF OVER 20 YEARS OF EXPERIENCE AND INNOVATION TO SECURE THE FUTURE OF COMPANIES AND CITIES.**

- OVER 1,000,000 CONNECTED CAMERAS
- 70,000+ CUSTOMERS
- OPERATIONS IN OVER 40 COUNTRIES
- LATEST TECHNOLOGIES
- INTEGRATION POSSIBILITIES
- MICROSOFT GOLD PARTNER
- ONVIF CONTRIBUTING MEMBER

## MIRASYS OPEN VIDEO MANAGEMENT SYSTEM

The MS Windows based Mirasys VMS provides numerous features that allow partners and customers to fulfil the requirements of various market verticals easily. Its scalability from stand-alone installation to networked systems with hundreds of sites enables unique possibilities. The software supports thousands of cameras in one centrally-managed environment. All cameras can be managed using a single system, regardless of the location of the cameras. The system provides a user interface that is available in 22 languages to allow more convenience for international users.

Via integration options on all architecture levels, the VMS supports process optimisation, security, business data analyses with AI tools and seamless connection to other operation relevant sensors and systems. As a result, all collected data can be efficiently utilised to make better decisions and reduce cost.
